

PROMECON delivers MECONTROL UBC system for EON Benelux Power Station

Maasvlakte, Rotterdam

Barleben: March 2009

EON has been a strong customer of PROMECON products in the past, especially the UBC range of systems.

The Benelux group of EON has now made the decision to replace their old UBC online systems at the power station Maasvlakte in the port of Rotterdam with the more reliable solution of PROMECON.

Maasvlakte Power Station

MECONTROL UBC Sensor

The two units in Maasvlakte have a capacity of 600 MW_{el} and will be retrofit with one MECONTROL UBC system and 4 sensors (2 per unit).

PROMECON will install the first unit in April 2009 and will retrofit the sensors for the second unit later in the year.

MECONTROL Coal has become the number one choice for power stations throughout Europe and the world when it comes to a reliable and accurate unburned carbon in ash analyser for ash quality control and boiler optimization.
